CERTIFICATE OF PROJECT COMPLETION

This is to certify that the project entitled
"Wellness Bite"
is a bonafide work carried out by
Nanjar Mayur G. (24CS002UG04310)
and **Pingal Dipali A. (24CS002UG04331)**
as a partial fulfillment of the requirements
for the B.C.A. Semester 5 during the
Academic Year 2026-2027.

The project report meets the academic requirements for the project work prescribed by Saurashtra University, Rajkot.

ABSTRACT

Wellness Bite is an online food ordering system designed to make healthy food ordering easy, fast, and convenient. It allows users to browse healthy food items, add them to the cart, and place orders online. The system also provides an admin panel to manage food items, categories, customers, and orders.

The main objective of this project is to promote healthy eating by providing a simple, secure, and user-friendly online platform.

wellness bite

ACKNOWLEDGEMENT

The feeling of gratefulness to any one's help directly arises from the bottom of heart. A small but an important and timely help can prove to be a milestone in one's life.

This project is dedicated to all the people, whom i met, took guidance, talked, interviewed and learned something from them. At this occasion i sincerely thank all of them while submitting this project report.

I would like to thank **MISS. DEVAKI TRIVEDI** for giving time-to-time valuable guidance during the project and giving me guidance in taking my curriculum decision and choosing, initiating and getting on with the project.

I always have felt the invisible help from the almighty, without the blessings of almighty, I could not have succeeded.

1. SDLC OVERVIEW

wellness bite

2. REQUIREMENT GATHERING AND ANALYSIS

2.1 ORGANIZATION DETAILS:

1. Name of the Organization: -

Wellness Bite – Online Food Ordering System

2. Brief detail of the organization: -

Wellness Bite is an online food ordering system developed to provide users with healthy food options such as salads, fruits, smoothies, soups, and diet meals. The system allows customers to browse the menu, place orders online, and make secure payments. It also provides an admin panel to manage food items, categories, orders, and users efficiently.

2.2 MEETINGS:

I. Meeting With Owner

1. Name Of Owner

-Mr. Mayur Nanjar

2. Owner's requirement in her words.

- User Login, Registration, Category List, Admin Panel, Customer Review etc.

II. Meeting with user

1. Name of the user.

-Mr. Mayur Nanjar

-Miss. Dipali Pingal

2. User requirement in her words.

- The system should allow users to easily browse healthy food items, add them to the cart, and place orders online in a simple and secure way.

- The system should provide fast order confirmation, secure payment, and allow users to view their order history and profile anytime.

2.3 Data which will be the input into the system….

- Text
- PDF
- Images

2.4 Data which will be the output from the system….

- Text
- PDF
- Images

2.5 Type of project….

- Online

2.6 Method for collecting data.

- Observation

wellness bite

3. SYSTEM REQUIREMENT SPECIFICATIONS

3.1 Introduction:

3.1.1 Purpose:

The main purpose of this project is to create a simple and easy- to -use online food ordering system where customers can order healthy food anytime. It also helps the admin manage food items and customer orders quickly and efficiently.

3.1.2 Intended Audience and Reading Suggestions:

This project is made for customers who want to order healthy food online and for the admin who manages food items, users, and orders. To understand the project easily, read the report from the first chapter to the last chapter in order and refer to the diagrams and screenshots wherever needed.

wellness bite

3.1.3 Product Scope:

Wellness Bite is an online food ordering system that Helps customers easily order healthy food. It also helps the admin manage food items, categories, users, and orders in a simple and efficient way.

3.2 Overall Description:

3.2.1 Product Function:

(i.) Admin Module :

- Login
- Dashboard
- Categories
- Food Management
- Orders
- Customers
- Users, Reports, Settings
- Log Out

(ii.) User Module :

- Register, Login
- Home, Categories
- Menu, Search
- Cart, Check out
- Payment, Orders
- Profile, Log Out

3.2.2 User classes and characteristics:

(i.) User Classes :

- Admin
- Customer

(ii.) User Characteristics :

(a) Administrator:

The administrator manages the whole system. The admin adds food items, manages orders, users, and categories.

(b) User:-

The user can register, log in, view food items, add items to The cart, and place orders easily.

3.2.3Operating Environment:

The Wellness Bite: Online Food Ordering System is developed using HTML, CSS, PHP, and MySQL. It runs on Windows 10/11 with the XAMPP (Apache) server. The system can be accessed using web browsers such as Google Chrome, Microsoft Edge, or Mozilla Firefox, and the project is developed using Visual Studio Code.

3.2.4Design and Implementation constraints:

- Developed using PHP, HTML, CSS, JavaScript, and MySQL.
- Runs on Windows 10/11.
- Requires XAMPP (Apache & MySQL) server.
- Requires a stable internet connection.
- Only authorized users can access the Admin Panel.

3.2.5 Assumptions and dependencies:

- A stable internet connection is available.
- The PHP, MySQL database, and XAMPP server are working properly.
- Users and the admin provide correct information and use the system properly.

3.3 External Interface Requirement:

3.3.1 User Interface:

The system provides a simple and user - friendly interface. Users can easily register, log in, browse food items, add products to the cart, and place orders. The admin can manage food items, categories, users, and orders through the admin dashboard.

3.3.2Software Interface:

- Operating System: Windows 11
- Web Server: XAMPP (Apache)
- Backend: PHP
- Database: MySQL
- Frontend: HTML, CSS
- Web Browser: Google Chrome
- Code Editor: Visual Studio Code

3.4 System Features:

- User Registration and Login.
- Food Menu and Categories
- Online Payment
- Admin Dashboard and Order Management

3.5 Other Nonfunctional Requirements:

3.5.1 Performance requirement:

- The system should load pages quickly.
- The system should process orders without delay.
- The system should support multiple users at the same time.

3.5.2 Security Requirement:

- Users and admins must log in with a username and password.
- Customer data should be stored securely.
- Only authorized users can access the admin panel.

3.5.3 Safety Requirement:

- The system should protect user data from unauthorized access.
- Regular database backup should be maintained.
- The system should prevent data loss and ensure reliable operation.

wellness bite

3.6 Feasibility Study

The Wellness Bite: Online Food Ordering System is a feasible project because it is developed using PHP, MySQL, HTML, CSS, JavaScript, and XAMPP, which are easily available and cost-effective. The system is simple and user-friendly, allowing customers to order healthy food online while enabling the admin to manage food items and orders efficiently. The project can be completed within the given time and provides a reliable and efficient online food ordering solution.

3.6.1 Operational Feasibility: -

The Wellness Bite: Online Food Ordering System is operationally feasible because it is simple, user-friendly, and easy to use. Customers can easily browse healthy food items, place orders, and make payments, while the admin can efficiently manage food items, categories, users, and orders. The system reduces manual work, saves time, and improves the overall food ordering process.

wellness bite

3.6.2 Technical Feasibility: -

The Wellness Bite: Online Food Ordering System is technically feasible because it is developed using PHP, HTML, CSS, JavaScript, MySQL, and XAMPP, which are easy to use and freely available. The system runs on Windows 11 and can be accessed through any modern web browser. Th e required hardware and software are easily available, making the project simple to develop and maintain.

3.6.3 Economic Feasibility: -

The Wellness Bite: Online Food Ordering System is economically feasible because it uses free and open - source technologies such as PHP, MySQL, XAMPP, and Visual Studio Code. The development cost is low, and the system helps reduce manual work, save time, and improve efficiency. Therefore, the project is cost-effective and affordable to develop and maintain.

3.6.4 Schedule Feasibility: -

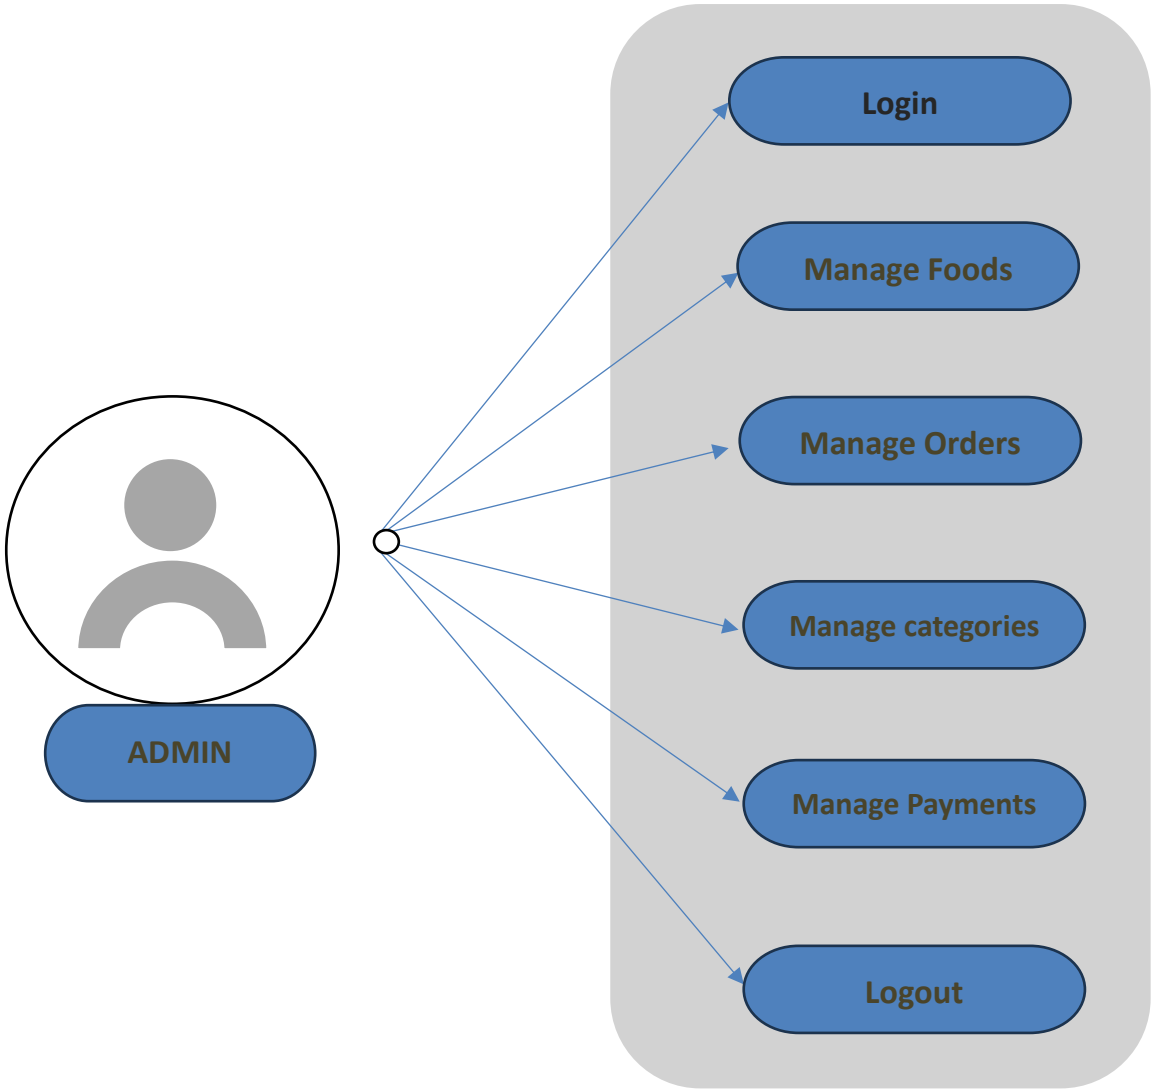

The Wellness Bite: Online Food Ordering System is schedule feasible because it can be completed within the planned project timeline. The project is divided into different phases such as planning, designing, development, testing, and implementation, making it easy to complete on time.

4.2 Normalization & E-R Diagram:

Normalization is the process of organizing the columns (attributes) and tables (relations) of a relational database to reduce data redundancy and improve data integrity.

De Normalized Form:

Order ID	Customer Name	Food Name	Category	Price (₹)	Payment	Order Status
1	Mayur Nanjar	Green Salad	Salad	120	UPI	Delivered
2	Dipi Pingal	Mango	Fruits	90	UPI	Delivered
18	Yash Kotecha	paneer salad	Salad	220	Cash on delivery	Delivered

Normalized Form:

A. 1st Normal Form:

1) Table Name : tbl_user

Primary Key: id (Auto Increment)

Id * (AI)	Name	email	Mobile	Password
1	Mayur Nanjar	mayur@gmail.com	9624077076	mayur@2007
2	Dipi Pingal	dipi@gmail.com	7990768989	dipi@2007

2) Table Name : tbl_admin

Primary Key: id (Auto Increment)

id * (AI)	Username	Password
1	mayur@gmail.com	mayur@2007
2	dipi@gmail.com	Dipi@2007

B. 2nd Normal Form:

3) Table Name : tbl_category

7. CODE SCREENSHOT

1) User Registration Module

Purpose:- This module allows new users to create an account in the Wellness Bite system by entering their basic details such as name, email, mobile number, and password. The entered information is stored in the database for future login and ordering.

Code:-

```php
<?php
session_start();
require_once 'conn.php';

$message = "";
$msgType = "success";

if (isset($_POST['register'])) {
    $name = trim($_POST['name']);
    $email = trim($_POST['email']);
    $mobile = trim($_POST['mobile']);
    $password = $_POST['password'];

    $check = mysqli_prepare($conn, "SELECT id FROM customers WHERE email = ?");
    mysqli_stmt_bind_param($check, "s", $email);
    mysqli_stmt_execute($check);
    $exists = mysqli_stmt_get_result($check);

    if (mysqli_num_rows($exists) > 0) {
        $message = "An account with this email already exists.";
        $msgType = "error";
    } else {
        $hashed = password_hash($password, PASSWORD_DEFAULT);
        $stmt = mysqli_prepare($conn, "INSERT INTO customers (name, email, mobile, password) VALUES (?, ?, ?, ?)");
        mysqli_stmt_bind_param($stmt, "ssss", $name, $email, $mobile, $hashed);

        if (mysqli_stmt_execute($stmt)) {
            $message = "Registration Successful! You can now log in.";
        } else {
            $message = "Something went wrong. Please try again.";
            $msgType = "error";
        }
    }
}
?>
```

wellness bite

Code Explanation:-

- **$_POST** – Gets registration data submitted from the form.
- **isset()** – Checks whether the registration request is submitted.
- **trim()** – Removes extra spaces from input values.
- **mysqli_prepare()** – Prepares a secure SQL query.
- **mysqli_stmt_bind_param()** – Binds user data safely to the query.
- **mysqli_stmt_execute()** – Executes the prepared SQL statement.
- **mysqli_stmt_get_result()** – Gets the result of the email-check query.
- **mysqli_num_rows()** – Checks whether the email already exists.
- **password_hash()** – Encrypts/hashes the password securely.
- **INSERT INTO** – Adds new customer details into the database.
- **if / else** – Handles success and error conditions.

- **$message** – Stores the success or error message.

- **$msgType** – Defines the type of message, such as error.

- **customers table** – Stores the registered user information.

wellness bite

2) User Login Module

Purpose:- This module verifies the user's email and password and allows valid users to securely access the Wellness Bite system.

Code:-

```php
if (isset($_SESSION['customer_id'])) {
    header("Location: index.php");
    exit();
}

if (isset($_POST['login'])) {
    $email = trim($_POST['email']);
    $password = $_POST['password'];

    $stmt = mysqli_prepare($conn, "SELECT * FROM customers WHERE email = ? LIMIT 1");
    mysqli_stmt_bind_param($stmt, "s", $email);
    mysqli_stmt_execute($stmt);
    $result = mysqli_stmt_get_result($stmt);

    if ($result && mysqli_num_rows($result) === 1) {
        $customer = mysqli_fetch_assoc($result);

        if ($customer['status'] === 'blocked') {
            $message = "Your account has been blocked. Please contact support.";
        } elseif (password_verify($password, $customer['password'])) {
            $_SESSION['customer_id'] = $customer['id'];
            $_SESSION['customer_name'] = $customer['name'];
            $_SESSION['customer_email'] = $customer['email'];
            $_SESSION['customer_mobile'] = $customer['mobile'];

            header("Location: index.php");
            exit();
        } else {
            $message = "Invalid Email or Password!";
        }
    } else {
        $message = "Invalid Email or Password!";
    }
}
```

wellness bite

Code Explanation:-

- **$_SESSION** – Stores customer login information.
- **isset()** – Checks whether the customer is already logged in.
- **header()** – Redirects the user to another page.
- **$_POST** – Gets email and password from the login form.
- **trim()** – Removes extra spaces from the email.
- **mysqli_prepare()** – Prepares a secure SQL query.
- **SELECT *** – Retrieves customer details from the database.
- **LIMIT 1** – Gets only one matching customer record.
- **mysqli_stmt_bind_param()** – Safely binds the email to the query.
- **mysqli_stmt_execute()** – Executes the SQL query.
- **mysqli_stmt_get_result()** – Gets the query result.
- **mysqli_num_rows()** – Checks whether the customer exists.
- **mysqli_fetch_assoc()** – Fetches customer data as an associative array.

- **status == blocked** – Checks whether the account is blocked.
- **password_verify()** – Verifies the entered password with the stored hashed password.
- **customer_id / name / email / mobile** – Stores customer details in the session.
- **Invalid Email or Password** – Displays an error when login details are incorrect.
- **exit()** – Stops further execution after redirection.

wellness bite

3) Food/Menu Management Module(ADD, UPDATE, DELETE)

Purpose:- This module is used to add, update, delete, and display food items in the Wellness Bite system, so users can easily view the available food menu.

Code:-

1) ADD:-

```php
if (isset($_POST['add_food'])) {
    $category_id = (int) $_POST['category_id'];
    $name = trim($_POST['name']);
    $description = trim($_POST['description']);
    $price = (float) $_POST['price'];
    $status = $_POST['status'] === 'inactive' ? 'inactive' : 'active';
    $image = '';

    if ($name === "" || $category_id <= 0 || $price <= 0) {
        $message = "Please fill in name, category and a valid price.";
        $msgType = "error";
    } else {

        if (isset($_FILES['image']) && $_FILES['image']['error'] === UPLOAD_ERR_OK) {
            $allowed = ['jpg', 'jpeg', 'png', 'webp'];
            $ext = strtolower(pathinfo($_FILES['image']['name'], PATHINFO_EXTENSION));
            if (in_array($ext, $allowed)) {
                $filename = uniqid('food_') . '.' . $ext;
                $destDir = __DIR__ . '/../uploads/';
                if (!is_dir($destDir)) mkdir($destDir, 0755, true);
                if (move_uploaded_file($_FILES['image']['tmp_name'], $destDir . $filename)) {
                    $image = 'uploads/' . $filename;
                }
            } else {
                $message = "Image must be jpg, jpeg, png or webp.";
                $msgType = "error";
            }
        }

        if ($msgType !== "error") {
            $stmt = mysqli_prepare($conn, "INSERT INTO foods (category_id, name, description, price, image, status) VALUES (?, ?, ?, ?, ?, ?)");
            mysqli_stmt_bind_param($stmt, "issdss", $category_id, $name, $description, $price, $image, $status);
            if (mysqli_stmt_execute($stmt)) {
                $message = "Food item added successfully.";
                $_POST = [];
            } else {
                $message = "Something went wrong. Please try again.";
                $msgType = "error";
            }
        }
    }
}
```

wellness bite

Code Explanation:-

- **$_POST['add_food']** – Checks whether the Add Food form is submitted.
- **category_id** – Stores the selected food category.
- **trim()** – Removes extra spaces from name and description.
- **float** – Converts the food price into a decimal value.
- **status** – Sets the food item as active or inactive.
- **Validation** – Checks name, category and price before adding food.
- **$_FILES** – Handles the uploaded food image.
- **Allowed extensions** – Accepts JPG, JPEG, PNG and WEBP images.
- **pathinfo()** – Gets the image file extension.
- **uniqid()** – Creates a unique filename for the image.
- **move_uploaded_file()** – Moves the uploaded image to the uploads folder.
- **mysqli_prepare()** – Prepares a secure SQL INSERT query.
- **mysqli_stmt_bind_param**() – Binds food data safely to the query.

- **mysqli_stmt_execute()** – Executes the query and adds the food item.
- **$message** – Displays success or error messages.
- **mysqli_query()** – Fetches categories from the database.
- **ORDER BY name** – Sorts categories alphabetically.

wellness bite

2) UPDATE

```php
if (!$food) {
    header("Location: manage_food.php");
    exit();
}

$message = "";
$msgType = "success";

if (isset($_POST['update_food'])) {
    $category_id = (int) $_POST['category_id'];
    $name = trim($_POST['name']);
    $description = trim($_POST['description']);
    $price = (float) $_POST['price'];
    $status = $_POST['status'] === 'inactive' ? 'inactive' : 'active';
    $image = $food['image'];

    if (isset($_FILES['image']) && $_FILES['image']['error'] === UPLOAD_ERR_OK) {
        $allowed = ['jpg', 'jpeg', 'png', 'webp'];
        $ext = strtolower(pathinfo($_FILES['image']['name'], PATHINFO_EXTENSION));
        if (in_array($ext, $allowed)) {
            $filename = uniqid('food_') . '.' . $ext;
            $destDir = __DIR__ . '/../uploads/';
            if (!is_dir($destDir)) mkdir($destDir, 0755, true);
            if (move_uploaded_file($_FILES['image']['tmp_name'], $destDir . $filename)) {
                $image = 'uploads/' . $filename;
            }
        }
    }

    $stmt2 = mysqli_prepare($conn, "UPDATE foods SET category_id=?, name=?, description=?, price=?, image=?, status=? WHERE id=?");
    mysqli_stmt_bind_param($stmt2, "issdssi", $category_id, $name, $description, $price, $image, $status, $id);

    if (mysqli_stmt_execute($stmt2)) {
        $message = "Food item updated successfully.";
        $food = array_merge($food, [
            'category_id' => $category_id, 'name' => $name, 'description' => $description,
            'price' => $price, 'image' => $image, 'status' => $status
        ]);
    } else {
        $message = "Update failed. Please try again.";
        $msgType = "error";
    }
}

$categories = mysqli_query($conn, "SELECT * FROM categories ORDER BY name");

include 'includes/header.php';
?>
```

wellness bite

Code Explanation:-

- **$food** – Stores the existing food item details.
- **header()** – Redirects to the food management page if the food is not found.
- **$_POST['update_food']** – Checks whether the Update Food form is submitted.
- **category_id** – Stores the selected food category.
- **trim()** – Removes extra spaces from name and description.
- **float** – Converts the price into a decimal value.
- **status** – Sets the food item as active or inactive.
- **$_FILES** – Handles the new food image upload.
- **Allowed extensions** – Accepts JPG, JPEG, PNG and WEBP images.
- **uniqid()** – Creates a unique name for the uploaded image.
- **move_uploaded_file()** – Moves the image to the uploads folder.

- **UPDATE foods SET** – Updates the existing food information in the database.
- **mysqli_prepare()** – Prepares a secure SQL update query.
- **mysqli_stmt_bind_param()** – Safely binds updated values to the query.
- **mysqli_stmt_execute()** – Executes the update query.
- **array_merge()** – Updates the $food array with the new values.
- **mysqli_query()** – Fetches categories from the database.
- **ORDER BY name** – Sorts categories alphabetically.
- **$message** – Displays success or error messages.

wellness bite

3) DELETE

```php
require_once 'includes/auth.php';
$pageTitle = "Update / Delete Food";

if (isset($_GET['delete'])) {
    $id = (int) $_GET['delete'];

    $res = mysqli_query($conn, "SELECT image FROM foods WHERE id = " . $id);
    if ($row = mysqli_fetch_assoc($res)) {
        if ($row['image'] && strpos($row['image'], 'uploads/') === 0 && file_exists(__DIR__ . '/../' . $row['image'])) {
            @unlink(__DIR__ . '/../' . $row['image']);
        }
    }

    $stmt = mysqli_prepare($conn, "DELETE FROM foods WHERE id = ?");
    mysqli_stmt_bind_param($stmt, "i", $id);
    mysqli_stmt_execute($stmt);
    header("Location: manage_food.php?msg=deleted");
    exit();
}

$message = ($_GET['msg'] ?? '') === 'deleted' ? "Food item deleted." : "";

$foods = mysqli_query($conn, "
    SELECT f.*, c.name AS category_name
    FROM foods f
    LEFT JOIN categories c ON f.category_id = c.id
    ORDER BY f.id DESC
");
```

wellness bite

Code Explanation:-

- **$_GET['delete']** – Gets the ID of the food item to delete.
- **(int)** – Converts the ID into an integer.
- **SELECT image** – Gets the image name of the selected food item.
- **mysqli_fetch_assoc()** – Fetches the image data from the database.
- **file_exists()** – Checks whether the image file exists.
- **unlink()** – Deletes the food image from the uploads folder.
- **mysqli_prepare()** – Prepares a secure DELETE query.
- **DELETE FROM foods** – Removes the food item from the database.
- **mysqli_stmt_bind_param()** – Safely binds the food ID to the query.
- **mysqli_stmt_execute()** – Executes the delete query.
- **header()** – Redirects back to the food management page.
- **$message** – Displays the “Food item deleted” message.
- **LEFT JOIN** – Combines food and category information.
- **ORDER BY f.id DESC** – Shows the latest food items first.

wellness bite

4) Order Module

Purpose:- This module allows users to place food orders, enter order details, calculate the total amount, and save the order information in the database.

Code:-

```php
<?php
require_once 'conn.php';

$orderId = isset($_GET['order_id']) ? (int) $_GET['order_id'] : 0;
$order = null;

if ($orderId > 0) {
    $stmt = mysqli_prepare($conn, "SELECT * FROM orders WHERE id = ?");
    mysqli_stmt_bind_param($stmt, "i", $orderId);
    mysqli_stmt_execute($stmt);
    $order = mysqli_fetch_assoc(mysqli_stmt_get_result($stmt));
}

$item = $order['food_name'] ?? (isset($_GET['item']) ? $_GET['item'] : "Food");
?>
```

wellness bite

Code Explanation:-

- **require_once – Connects the database using conn.php.**
- **$_GET['order_id'] – Gets the order ID from the URL.**
- **isset() – Checks whether the order ID is available.**
- **mysqli_prepare() – Prepares the SQL query safely.**
- **SELECT * FROM orders – Fetches order details from the orders table.**
- **WHERE id = ? – Finds the specific order using its ID.**
- **mysqli_stmt_bind_param() – Passes the order ID to the query.**
- **mysqli_stmt_execute() – Executes the SQL query.**
- **mysqli_fetch_assoc() – Gets the order data as an array.**
- **$order['food_name'] – Gets the food name from the order.**
- **$_GET['item'] – Gets the item name from the URL if needed.**
- **?? "Food" – Uses "Food" as the default value if no food name is available.**

wellness bite

5) Admin Management Module(Login, Dashboard, Logout)

Purpose:-The Admin Management Module provides secure access and control of the Wellness Bite System .It includes Admin Login for secure access, Dashboard for managing system activites, and Logout for safely existing the admin panel.

Code:-

1) Login

```php
if (isset($_SESSION['admin_id'])) {
    header("Location: admin/dashboard.php");
    exit();
}

$error = "";

if (isset($_POST['login'])) {

    $username = trim($_POST['username']);
    $password = $_POST['password'];

    $stmt = mysqli_prepare(
        $conn,
        "SELECT id, username, password FROM admin WHERE username = ? LIMIT 1"
    );

    mysqli_stmt_bind_param($stmt, "s", $username);
    mysqli_stmt_execute($stmt);

    $result = mysqli_stmt_get_result($stmt);

    if ($result && mysqli_num_rows($result) === 1) {

        $admin = mysqli_fetch_assoc($result);

        if (password_verify($password, $admin['password'])) {

            $_SESSION['admin_id'] = $admin['id'];
            $_SESSION['admin_username'] = $admin['username'];

            header("Location: admin/dashboard.php");
            exit();

        } else {
            $error = "Invalid Username or Password!";
        }

    } else {
        $error = "Invalid Username or Password!";
    }
}
?>
```

wellness bite

Code Explanation:-

- **$_SESSION['admin_id']** – Checks whether the admin is already logged in.
- **header()** – Redirects the logged-in admin to the dashboard.
- **$_POST['login']** – Checks whether the login form is submitted.
- **trim()** – Removes extra spaces from the username.
- **mysqli_prepare()** – Prepares a secure SQL query.
- **SELECT** – Retrieves admin ID, username and password from the database.
- **LIMIT 1** – Gets only one matching admin record.
- **mysqli_stmt_bind_param()** – Safely binds the username to the query.
- **mysqli_stmt_execute()** – Executes the SQL query.
- **mysqli_stmt_get_result()** – Gets the query result.
- **mysqli_num_rows()** – Checks whether the admin exists.
- **mysqli_fetch_assoc()** – Fetches admin details from the result.
- **password_verify()** – Verifies the entered password with the stored hashed password.

- **$_SESSION['admin_id']** – Stores the admin ID after successful login.
- **$_SESSION['admin_username']** – Stores the admin username in the session.
- **$error** – Displays an invalid username or password message.
- **exit()** – Stops execution after successful redirection.

wellness bite

2) Dashboard

```
    <div class="stat-card">
        <h3><?php echo $totalOrders; ?></h3>
        <p>Total Orders</p>
    </div>
    <div class="stat-card">
        <h3>₹<?php echo number_format($totalRevenue, 2); ?></h3>
        <p>Revenue Collected</p>
    </div>
    <div class="stat-card">
        <h3><?php echo $totalCustomers; ?></h3>
        <p>Registered Customers</p>
    </div>
    <div class="stat-card">
        <h3><?php echo $totalFoods; ?></h3>
        <p>Food Items</p>
    </div>
    <div class="stat-card">
        <h3><?php echo $pendingOrders; ?></h3>
        <p>Pending Orders</p>
    </div>
    <div class="stat-card">
        <h3><?php echo $activeOffers; ?></h3>
        <p>Active Offers</p>
    </div>
</div>

<div class="panel">
    <h2>Recent Orders</h2>
    <table>
        <tr>
            <th>#</th>
            <th>Customer</th>
            <th>Food</th>
            <th>Amount</th>
            <th>Status</th>
            <th>Date</th>
        </tr>
        <?php
        $recent = mysqli_query($conn, "SELECT * FROM orders ORDER BY id DESC LIMIT 8");
        if (mysqli_num_rows($recent) === 0) {
            echo '<tr><td colspan="6" class="empty-state">No orders yet.</td></tr>';
        }
        while ($row = mysqli_fetch_assoc($recent)) {
            $statusClass = 'badge-' . strtolower(str_replace(' ', '-', $row['status']));
            echo "<tr>
                <td>#{$row['id']}</td>
                <td>" . htmlspecialchars($row['customer_name']) . "</td>
                <td>" . htmlspecialchars($row['food_name']) . "</td>
                <td>₹" . number_format($row['price'], 2) . "</td>
                <td><span class='badge {$statusClass}'>" . htmlspecialchars($row['status']) . "</span></td>
                <td>" . date('d M Y', strtotime($row['created_at'])) . "</td>
            </tr>";
        }
```

wellness bite

Code Explanation:-

- **$totalOrders** – Displays the total number of orders.
- **$totalRevenue** – Displays the total collected revenue.
- **number_format()** – Formats the revenue to 2 decimal places.
- **$totalCustomers** – Displays the total registered customers.
- **$totalFoods** – Displays the total food items.
- **$pendingOrders** – Displays the number of pending orders.
- **$activeOffers** – Displays the number of active offers.
- **stat-card** – Creates dashboard summary cards.
- **Recent Orders** – Shows the latest customer orders.
- **mysqli_query()** – Executes the database query.
- **ORDER BY id DESC** – Displays newest orders first.
- **LIMIT 8** – Displays only the latest 8 orders.
- **mysqli_num_rows()** – Checks whether orders are available.
- **mysqli_fetch_assoc()** – Fetches order details row by row.
- **while loop** – Displays multiple order records.

- **htmlspecialchars()** – Safely displays customer, food and status data.
- **number_format()** – Formats the order price.
- **$statusClass** – Creates a CSS class based on order status.
- **date()** – Formats the order creation date.
- **empty-state** – Displays “No orders yet” when there are no orders.

wellness bite

3) Logout

```php
<?php
session_start();
$_SESSION = array();
session_destroy();
header("Location: ../admin_login.php");
exit();
?>

```

Code Explanation :-

- **session_start()** – Starts the current session.
- **$_SESSION = array()** – Clears all session data.
- **session_destroy()** – Destroys the active session.
- **header()** – Redirects the admin to the login page.
- **exit()** – Stops further code execution.
- **admin_login.php** – Admin login page after logout.

wellness bite

8. LIMITATIONS AND FUTURE ENHANCEMENT

- **Limitations:-**

- The limitation of Wellness Bite is that only one admin can be assigned to the system.
- The system requires an internet connection for online food ordering and accessing the application.
- Online payment options may be limited depending on the payment gateway integration.
- Delivery tracking is not currently available in the system.
- The application has limited customization options for users.

wellness bite

- **Future Enhancement:-**

- In future, the overall application design and user interface will be improved.
- Multiple admin accounts and role-based admin access will be provided.
- Online payment gateway integration will be added.
- Real-time order and delivery tracking will be provided.
- Offers, discounts, and promotional features will be added.
- All other limitations would be removed in future versions.

wellness bite

9. CONCLUSION

The project report entitled “Wellness Bite – Online Food Ordering System” has been completed successfully. This web application has been developed to provide users with a simple, convenient, and user-friendly platform for ordering healthy food online. The system helps users browse different food categories, view food items, place orders, and manage their orders efficiently.

I have tried my best to make the Wellness Bite application easy to use, efficient, and reliable. The system also provides an admin module for managing food items, customers, and orders. The application has been designed with scope for future improvements and additional features.

Overall, Wellness Bite provides a useful solution for online healthy food ordering and can be further enhanced according to future requirements.
